      Result
No.
                                                       Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

It currently consists of 2 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will the record is updated, the accession number will

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated repeat sequence elements. Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: EmBL: Sw., SWISSPROT: Tr., TREMBL: Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutherla; Primates; Catarrhini; Hominidae; Homo. 1 (bases 1 to 153072)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: This is a 'working draft' sequence. It currently consists of 22 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.

Pred. No. is the number of results predicted by chance to have score greater than or equal to the score of the result being pu and is derived by analysis of the total score distribution. s of printed

```
CC Sequences AAM52830-AAM52842 represent novel protein kinase stress-related CC proteins (PKSRPs) from the moss physcomitrella patens, and sequences CC ABA91069-ABA91081 represent full-length cDNAs encoding them. The cDNA CC sequences were obtained from expressed sequence tags (ESTs; ABA91056-CC ABA91069) derived from Physcomitrella patens cDNA libraries. The PKSRPS CC of the invention comprise protein kinase-6 (PK-6), protein kinase-7 (CK-7), protein kinase-8 (PK-0), protein kinase-9 (PK-9), casein kinase-1 (CK-7), protein kinase-1 (CK-7), protein kinase-2 (CK-2), casein kinase-1 (CK-7), protein kinase-1 (CK-3), mitogen-activated protein (MAP) kinase-2 (MPK-2), CC calcium-dependent protein kinase-1 (CFX-1), and calcium-dependent protein confer conference to environmental stresses such as salinity, drought, cumperature, metal, chemical, pathogenic and oxidative stress.

CC temperature, metal, chemical, pathogenic and oxidative stress.

CC transgenic plants and seeds with increased tolerance to salinity drought cand temperature. The transgenic plants generated can be monocots or calcium-dependent protein structural studies and temperature. Solution, rapeseed, cassava, sunflower, tagetes, leguminous plants (e.g., soybean, peanut, Vicia species, alfaffa), solanaceous plants (e.g., potato, tobacco, aubergine, pepper, tomato), coffee, cacao, tea, complex structural studies and as markers for specific regions of the genome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Ma

CS Sequences AAM52830-AAM52842 represent novel protein kinase stress-related CC ABA91069-ABA91081 represent full-length cDNAs encoding them. The cDNA CC ABA91089 derived from the moss physcomitrella patens, and sequences CC ABA91089 derived from expressed sequence tags (ESTs; ABA91056-CC ABA91089) derived from Physcomitrella patens cDNA libraries. The PKSRPS CC of the invention comprise protein kinase-6 (PK-6), protein kinase-7 (CFK-7), protein kinase-8 (PK-8), protein kinase-7 (CFK-7), casein kinase-6 (PK-8), protein kinase-7 (CFK-7), protein kinase-7 (CFK-7), protein kinase-7 (CFK-7), casein kinase-7 (CFK-7), protein kinase-7 (CFK-7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New protein, useful for increasing tolerance to environmental comprises a Protein Kinase Stress-Related Protein selected fi Protein kinases, Casein kinase homologs, MAP kinases or Calci
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    06-APR-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      18-OCT-2001

                                               The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arterioscierosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

REPRESENTED DE LA REPRESENTATION DE LA REPRESENTATI
                                            The invention relates to novel genes (ABA11004-ABA21534) and proteins CC (ABB14678-ABB18001) useful for preventing, treating or ameliorating CC medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. CC in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast CC and ovarian cancer and other cancers of the adrenal gland, bone, bone CC marrow, breast, gastrointestinal tract, liver, lung, or urogenital: CC (b) immune discrders e.g. Addison's disease, allergies, autoimmune CC disease, multiple sclerosis, rheumatoid arthritis and ulcerative CC (d) wound healing; (e) cardiovascular discrders such as myocardial ischaemias; CC (d) wound bealing; (e) neurological diseases e.g. cerebral anoxia and CC epilepsy; and (f) infectious diseases such as viral, bacterial, fungal CC and parasitic infections.

CC Note: The sequence data for this patent did not form part of the CC printed specification, but was obtained in electronic format directly CC from WIPO at ftp.wipo.int/pub/published_pct_sequencess.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              08-NOV-2000;

The patent discloses a method for identifying genes that enhance levels of disease resistance if expressed in susceptible plants. The method is useful for isolating disease resistance genes (R gene) in plants. These genes confer non-host disease resistance to plants by responding to avirulence genes in plant pathogens. The R-genes identified trigger a hypersensitive response (HR) in tobacco that is dependent on the presence of the Phytophthora infestans elicitor INF1. The genes are useful for generating pathogen-resistant transgenic plants. They can be used to control viral, fungal, bacterial or nematodal pathogens, e.g. Phytophthora, Erisyphe and Puccinia. The present sequence is the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1567

capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16180-ABL16175) and the encoded proteins

Claim 1; SEQ ID NO 12062; 21pp + Sequence Listing; English

invention relates to an isolated nucleic acid detection reagent

invention

ST

and

interactions

isolated nucleic acid es from Drosophila and

detection reagent for detecting for elucidating cell signalling

1000 and c

cell-cell

(ABB57737-ABB72072).
The sequence data for this patent did not form part of the prospecification, but was obtained in electronic format directly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Drosophila melanogaster expressed
                                                                                                                                                                                                                      capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG1840-ABLIG175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Drosophila; developmental pharmaceutical; gene; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            4805
                                                                                                                                                                 capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLJ6176-ABL30511), expressed DNA sequences (ABLJ6175) and the encoded proteins (ABB57737-ABB72072).

                                                                                                                                                                                                                                                                                         The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arterioscierosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

                                               The polynucleotide sequences given in AAF33213 to AAF33261 encode the CC human secreted proteins given in AAB64930. AAB64931 to AAB64991 represent human secreted polypeptide sequences and proteins CC homologous to them, which are given in the exemplification of the present CC invention. Human secreted proteins have activities based on the tissues CC and cells the genes are expressed in. Examples of activities include: CC antiinflammatory; anti-HIV; immunostimulant; cytostatic; cardiant; CC vascular; antionvulsant; notropic; antialzheimers; CC vascular; anticonvulsant; notropic; antialzheimers; CC antiparkinsonian; and vulnerary. The polynucleotides and polypeptides can be used in the prevention, diagnosis and treatment of diseases associated CC with inappropriate polypeptide expression. Disorders that may be prevented, diagnosed and/or treated by the above methods include immune CC disorders (e.g. multiple sclerosis, systemic lupus erythematosus and CC human immuno-deficiency virus (HIV) infections), hyperproliferative CC (e.g. Scimitar syndrome, Chaga's cardiomypathy and coronary CC (e.g. Scimitar syndrome, Chaga's cardiomypathy and coronary CC (e.g. Huntington's chorea, Alzheimer's disease), cardiovascular diseases (e.g. corneal graft coronary corona
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; secreted protein; diagnosis; immunomodulatory; antisclerotic; dermatological; immunosuppressive; antiinflammatory; anti-HIV; immunostimulant; cytostatic; cardiant; vascular; anti-angiogenic; ophthalmological; neuroprotectant; nootropic; anticonvulsant; vulnerary; antialzheimers; antiparkinsonian; antimicrobial; immune disorder; multiple sclerosis; systemic lupus erythematosus; HIV; infection; hyperproliferative disorder; cancer; Gaucher's disease; wound healing; cardiovascular disease; Scimitar syndrome; Chaga's cardiomyopathy; coronary arteriosclerosis; anglogenic disorder; diabetic retinopathy; corneal graft neovascularisation; neurological disorder; regeneration; Huntington's chorea; Alzheimer's disease; Parkinson's disease; infectious disease; chemotaxis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acids encoding 49 human secreted polypeptides, useful for preventing, diagnosing and/or treating e.g. cancers, Parkinson's disease and diabetic retinopathy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    11-JUN-1999;

           The present invention provides a number of human immune system associate genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

       The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Albheimer's disease, Alb, epilepsy, neurofibromatosis,

                                                                                                                                                        This sequence represents a gene encoding a subunit of the cellulose synthase complex of Vigna angularis. The invention relates to subunits cellulose synthetic equipment, that can be used to increase the amount cellulose synthesised by a plant. The proteins and genes encoding them can also be used to improve the properties of the cellulose being produced by a plant.
